

RETHINK THE MACHINE NOT THE MINE

INTRODUCING THE ALL NEW LH518B 18 TONNE BATTERY LOADER

The LH518B has been designed from the ground-up, entirely around the loader's Artisan™ battery system, electric driveline, and patented AutoSwap battery system, to best utilize the possibilities that battery technology brings.

With no torque converter, transmission, or engine to rev up, the LH518B is fast and agile. Its design allows the loader to fit in a 4.5 x 4.5 meter tunnel and carry 18 tonne loads.

AutoSwap is a self-swapping system for the Artisan™ battery pack that makes battery swapping fast and easy. It takes about 6 minutes and can be completed in a passing bay or old re-muck bay with no overhead cranes or external infrastructure required.
